Struct System Interface

This interface represents a structured-grid conceptual view of a linear system.

Author: Robert D. Falgout

Names

1.1	Struct Grids	3
1.2	Struct Stencils	4
1.3	Struct Matrices	5
1.4	Struct Vectors	7

1.1

Struct Grids

Names

	typedef struct hypre_StructGrid_struct* HYPRE_StructGrid	
	<i>A grid object is constructed out of several "boxes", defined on a global abstract index space</i>	
	int	
	HYPRE_StructGridCreate (MPIComm comm, int ndim,	
	HYPRE_StructGrid *grid)	
	<i>Create an ndim-dimensional grid object</i>	
1.1.1	int	
	HYPRE_StructGridDestroy (HYPRE_StructGrid grid)	
	<i>Destroy a grid object</i>	4
	int	

HYPRE_StructGridSetExtents (HYPRE_StructGrid grid, int *ilower,
int *iupper)

Set the extents for a box on the grid

int

HYPRE_StructGridAssemble (HYPRE_StructGrid grid)

Finalize the construction of the grid before using

int

HYPRE_StructGridSetPeriodic (HYPRE_StructGrid grid, int *periodic)

(Optional) Set periodic

1.1.1

int **HYPRE_StructGridDestroy** (HYPRE_StructGrid grid)

Destroy a grid object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

1.2

Struct Stencils

Names

typedef struct hypre_StructStencil_struct* **HYPRE_StructStencil**

The stencil object

int

HYPRE_StructStencilCreate (int ndim, int size,
HYPRE_StructStencil *stencil)

Create a stencil object for the specified number of spatial dimensions and stencil entries

int

HYPRE_StructStencilDestroy (HYPRE_StructStencil stencil)

Destroy a stencil object

1.2.1

int

HYPRE_StructStencilSetElement (HYPRE_StructStencil stencil, int entry,
int *offset)

Set a stencil entry

5

1.2.1

```
int
HYPRE_StructStencilSetElement (HYPRE_StructStencil stencil, int entry, int
*offset)
```

Set a stencil entry.

NOTE: The name of this routine will eventually be changed to `HYPRE_StructStencilSetEntry`.

1.3

Struct Matrices

Names

```
typedef struct  hypre_StructMatrix_struct*  HYPRE_StructMatrix
    The matrix object

int
HYPRE_StructMatrixCreate (MPI_Comm comm, HYPRE_StructGrid grid,
    HYPRE_StructStencil stencil,
    HYPRE_StructMatrix *matrix)
    Create a matrix object

int
HYPRE_StructMatrixDestroy (HYPRE_StructMatrix matrix)
    Destroy a matrix object

int
HYPRE_StructMatrixInitialize (HYPRE_StructMatrix matrix)
    Prepare a matrix object for setting coefficient values

int
HYPRE_StructMatrixSetValues (HYPRE_StructMatrix matrix, int *index,
    int nentries, int *entries, double *values)
    Set matrix coefficients index by index

int
HYPRE_StructMatrixSetBoxValues (HYPRE_StructMatrix matrix,
    int *ilower, int *iupper, int nentries,
    int *entries, double *values)
    Set matrix coefficients a box at a time

int
```

		HYPRE_StructMatrixAddToValues (HYPRE_StructMatrix matrix, int *index, int nentries, int *entries, double *values) <i>Add to matrix coefficients index by index</i>	
	int	HYPRE_StructMatrixAddToBoxValues (HYPRE_StructMatrix matrix, int *ilower, int *iupper, int nentries, int *entries, double *values) <i>Add to matrix coefficients a box at a time</i>	
	int	HYPRE_StructMatrixAssemble (HYPRE_StructMatrix matrix) <i>Finalize the construction of the matrix before using</i>	
1.3.1	int	HYPRE_StructMatrixSetSymmetric (HYPRE_StructMatrix matrix, int symmetric) <i>(Optional) Define symmetry properties of the matrix</i>	6
1.3.2	int	HYPRE_StructMatrixPrint (const char *filename, HYPRE_StructMatrix matrix, int all) <i>Print the matrix to file</i>	6

1.3.1

```

int
HYPRE_StructMatrixSetSymmetric (HYPRE_StructMatrix matrix, int
symmetric)

```

(Optional) Define symmetry properties of the matrix. By default, matrices are assumed to be nonsymmetric. Significant storage savings can be made if the matrix is symmetric.

1.3.2

```

int
HYPRE_StructMatrixPrint (const char *filename, HYPRE_StructMatrix
matrix, int all)

```

Print the matrix to file. This is mainly for debugging purposes.

1.4

Struct Vectors

Names

```

typedef struct  hypre_StructVector_struct*  HYPRE_StructVector
    The vector object

int
HYPRE_StructVectorCreate (MPI_Comm comm, HYPRE_StructGrid grid,
                          HYPRE_StructVector *vector)
    Create a vector object

int
HYPRE_StructVectorDestroy (HYPRE_StructVector vector)
    Destroy a vector object

int
HYPRE_StructVectorInitialize (HYPRE_StructVector vector)
    Prepare a vector object for setting coefficient values

int
HYPRE_StructVectorSetValues (HYPRE_StructVector vector, int *index,
                              double value)
    Set vector coefficients index by index

int
HYPRE_StructVectorSetBoxValues (HYPRE_StructVector vector,
                                int *ilower, int *iupper,
                                double *values)
    Set vector coefficients a box at a time

int
HYPRE_StructVectorAddToValues (HYPRE_StructVector vector,
                                int *index, double value)
    Set vector coefficients index by index

int
HYPRE_StructVectorAddToBoxValues (HYPRE_StructVector vector,
                                    int *ilower, int *iupper,
                                    double *values)
    Set vector coefficients a box at a time

int
HYPRE_StructVectorAssemble (HYPRE_StructVector vector)
    Finalize the construction of the vector before using

int
HYPRE_StructVectorGetValues (HYPRE_StructVector vector, int *index,
                              double *value)
    Get vector coefficients index by index

int

```

HYPRE_StructVectorGetBoxValues (HYPRE_StructVector vector,
int *ilower, int *iupper,
double *values)

Get vector coefficients a box at a time

1.4.1

int

HYPRE_StructVectorPrint (const char *filename,
HYPRE_StructVector vector, int all)

Print the vector to file

8

1.4.1

int

HYPRE_StructVectorPrint (const char *filename, HYPRE_StructVector vector,
int all)

Print the vector to file. This is mainly for debugging purposes.

SStruct System Interface

This interface represents a semi-structured-grid conceptual view of a linear system.

Author: Robert D. Falgout

Names

2.1	SStruct Grids	9
2.2	SStruct Stencils	13
2.3	SStruct Graphs	13
2.4	SStruct Matrices	14
2.5	SStruct Vectors	19

SStruct Grids

Names

2.1.1	typedef struct hypre_SStructGrid_struct* HYPRE_SStructGrid <i>A grid object is constructed out of several structured “parts” and an optional unstructured “part”</i>	10
2.1.2	typedef enum hypre_SStructVariable_enum HYPRE_SStructVariable <i>An enumerated type that supports cell centered, node centered, face centered, and edge centered variables</i>	11
2.1.3	int HYPRE_SStructGridCreate (MPI_Comm comm, int ndim, int nparts, HYPRE_SStructGrid *grid) <i>Create an ndim-dimensional grid object with nparts structured parts</i>	

	HYPRE_SStructGridDestroy (HYPRE_SStructGrid grid)	
	<i>Destroy a grid object</i>	12
	int	
	HYPRE_SStructGridSetExtents (HYPRE_SStructGrid grid, int part, int *ilower, int *iupper)	
	<i>Set the extents for a box on a structured part of the grid</i>	
	int	
	HYPRE_SStructGridSetVariables (HYPRE_SStructGrid grid, int part, int nvars, HYPRE_SStructVariable *vartypes)	
	<i>Describe the variables that live on a structured part of the grid</i>	
2.1.4	int	
	HYPRE_SStructGridAddVariables (HYPRE_SStructGrid grid, int part, int *index, int nvars, HYPRE_SStructVariable *vartypes)	
	<i>Describe additional variables that live at a particular index</i>	12
2.1.5	int	
	HYPRE_SStructGridSetNeighborBox (HYPRE_SStructGrid grid, int part, int *ilower, int *iupper, int nbor_part, int *nbor_ilower, int *nbor_iupper, int *index_map)	
	<i>Describe how regions just outside of a part relate to other parts</i>	12
2.1.6	int	
	HYPRE_SStructGridAddUnstructuredPart (HYPRE_SStructGrid grid, int ilower, int iupper)	
	<i>Add an unstructured part to the grid</i>	13
	int	
	HYPRE_SStructGridAssemble (HYPRE_SStructGrid grid)	
	<i>Finalize the construction of the grid before using</i>	
	int	
	HYPRE_SStructGridSetPeriodic (HYPRE_SStructGrid grid, int part, int *periodic)	
	<i>(Optional) Set periodic for a particular part</i>	

2.1.1

```
#define HYPRE_SStructGrid
```

A grid object is constructed out of several structured “parts” and an optional unstructured “part”. Each structured part has its own abstract index space.

2.1.2

```
#define HYPRE_SStructVariable
```

An enumerated type that supports cell centered, node centered, face centered, and edge centered variables. Face centered variables are split into x-face, y-face, and z-face variables, and edge centered variables are split into x-edge, y-edge, and z-edge variables. The edge centered variable types are only used in 3D. In 2D, edge centered variables are handled by the face centered types.

Variables are referenced relative to an abstract (cell centered) index in the following way:

- cell centered variables are aligned with the index;
- node centered variables are aligned with the cell corner at relative index $(1/2, 1/2, 1/2)$;
- x-face, y-face, and z-face centered variables are aligned with the faces at relative indexes $(1/2, 0, 0)$, $(0, 1/2, 0)$, and $(0, 0, 1/2)$, respectively;
- x-edge, y-edge, and z-edge centered variables are aligned with the edges at relative indexes $(0, 1/2, 1/2)$, $(1/2, 0, 1/2)$, and $(1/2, 1/2, 0)$, respectively.

The supported identifiers are:

- HYPRE_SSTRUCT_VARIABLE_CELL
- HYPRE_SSTRUCT_VARIABLE_NODE
- HYPRE_SSTRUCT_VARIABLE_XFACE
- HYPRE_SSTRUCT_VARIABLE_YFACE
- HYPRE_SSTRUCT_VARIABLE_ZFACE
- HYPRE_SSTRUCT_VARIABLE_XEDGE
- HYPRE_SSTRUCT_VARIABLE_YEDGE
- HYPRE_SSTRUCT_VARIABLE_ZEDGE

NOTE: Although variables are referenced relative to a unique abstract cell-centered index, some variables are associated with multiple grid cells. For example, node centered variables in 3D are associated with 8 cells (away from boundaries). Although grid cells are distributed uniquely to different processes, variables may be owned by multiple processes because they may be associated with multiple cells.

2.1.3

```
int  HYPRE_SStructGridDestroy (HYPRE_SStructGrid grid)
```

Destroy a grid object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

2.1.4

```
int
HYPRE_SStructGridAddVariables (HYPRE_SStructGrid grid, int part, int
    *index, int nvars, HYPRE_SStructVariable *vartypes)
```

Describe additional variables that live at a particular index. These variables are appended to the array of variables set in `HYPRE_SStructGridSetVariables` (→ *page 10*), and are referenced as such.

2.1.5

```
int
HYPRE_SStructGridSetNeighborBox (HYPRE_SStructGrid grid, int part, int
    *ilower, int *iupper, int nbor_part, int *nbor_ilower, int *nbor_iupper, int
    *index_map)
```

Describe how regions just outside of a part relate to other parts. This is done a box at a time.

The indexes `ilower` and `iupper` map directly to the indexes `nbor_ilower` and `nbor_iupper`. Although, it is required that indexes increase from `ilower` to `iupper`, indexes may increase and/or decrease from `nbor_ilower` to `nbor_iupper`.

The `index_map` describes the mapping of indexes 0, 1, and 2 on part `part` to the corresponding indexes on part `nbor_part`. For example, triple (1, 2, 0) means that indexes 0, 1, and 2 on part `part` map to indexes 1, 2, and 0 on part `nbor_part`, respectively.

2.1.6

```
int
HYPRE_SStructGridAddUnstructuredPart (HYPRE_SStructGrid grid, int
ilower, int iupper)
```

Add an unstructured part to the grid. The variables in the unstructured part of the grid are referenced by a global rank between 0 and the total number of unstructured variables minus one. Each process owns some unique consecutive range of variables, defined by **ilower** and **iupper**.

NOTE: This is just a placeholder. This part of the interface is not finished.

2.2

SStruct Stencils

Names

```
typedef struct  hypre_SStructStencil_struct*  HYPRE_SStructStencil
    The stencil object

int
HYPRE_SStructStencilCreate (int ndim, int size,
                             HYPRE_SStructStencil *stencil)
    Create a stencil object for the specified number of spatial dimensions and
    stencil entries

int
HYPRE_SStructStencilDestroy (HYPRE_SStructStencil stencil)
    Destroy a stencil object

int
HYPRE_SStructStencilSetEntry (HYPRE_SStructStencil stencil, int entry,
                                int *offset, int var)
    Set a stencil entry
```

2.3

SStruct Graphs

Names

```
typedef struct hypre_SStructGraph_struct* HYPRE_SStructGraph
    The graph object is used to describe the nonzero structure of a matrix
```

```
int
HYPRE_SStructGraphCreate (MPI_Comm comm,
                          HYPRE_SStructGrid grid,
                          HYPRE_SStructGraph *graph)
    Create a graph object
```

```
int
HYPRE_SStructGraphDestroy (HYPRE_SStructGraph graph)
    Destroy a graph object
```

```
int
HYPRE_SStructGraphSetStencil (HYPRE_SStructGraph graph, int part,
                              int var, HYPRE_SStructStencil stencil)
    Set the stencil for a variable on a structured part of the grid
```

```
2.3.1 int
HYPRE_SStructGraphAddEntries (HYPRE_SStructGraph graph, int part,
                              int *index, int var, int to_part,
                              int *to_index, int to_var)
    Add a non-stencil graph entry at a particular index ..... 14
```

```
int
HYPRE_SStructGraphAssemble (HYPRE_SStructGraph graph)
    Finalize the construction of the graph before using
```

2.3.1

```
int
HYPRE_SStructGraphAddEntries (HYPRE_SStructGraph graph, int part, int
*index, int var, int to_part, int *to_index, int to_var)
```

Add a non-stencil graph entry at a particular index. This graph entry is appended to the existing graph entries, and is referenced as such.

NOTE: Users are required to set graph entries on all processes that own the associated variables. This means that some data will be multiply defined.

2.4

SStruct Matrices

Names

	typedef struct hypre_SStructMatrix_struct* HYPRE_SStructMatrix <i>The matrix object</i>	
	int HYPRE_SStructMatrixCreate (MPLComm comm, HYPRE_SStructGraph graph, HYPRE_SStructMatrix *matrix) <i>Create a matrix object</i>	
	int HYPRE_SStructMatrixDestroy (HYPRE_SStructMatrix matrix) <i>Destroy a matrix object</i>	
	int HYPRE_SStructMatrixInitialize (HYPRE_SStructMatrix matrix) <i>Prepare a matrix object for setting coefficient values</i>	
2.4.1	int HYPRE_SStructMatrixSetValues (HYPRE_SStructMatrix matrix, int part, int *index, int var, int nentries, int *entries, double *values) <i>Set matrix coefficients index by index</i>	16
2.4.2	int HYPRE_SStructMatrixSetBoxValues (HYPRE_SStructMatrix matrix, int part, int *ilower, int *iupper, int var, int nentries, int *entries, double *values) <i>Set matrix coefficients a box at a time</i>	16
2.4.3	int HYPRE_SStructMatrixAddToValues (HYPRE_SStructMatrix matrix, int part, int *index, int var, int nentries, int *entries, double *values) <i>Add to matrix coefficients index by index</i>	17
2.4.4	int HYPRE_SStructMatrixAddToBoxValues (HYPRE_SStructMatrix matrix, int part, int *ilower, int *iupper, int var, int nentries, int *entries, double *values) <i>Add to matrix coefficients a box at a time</i>	17
	int HYPRE_SStructMatrixAssemble (HYPRE_SStructMatrix matrix) <i>Finalize the construction of the matrix before using</i>	
2.4.5	int HYPRE_SStructMatrixSetSymmetric (HYPRE_SStructMatrix matrix, int symmetric) <i>Define symmetry properties of the matrix</i>	18
2.4.6	int HYPRE_SStructMatrixSetObjectType (HYPRE_SStructMatrix matrix, int type) <i>Set the storage type of the matrix object to be constructed</i>	18
2.4.7	int	

	HYPRE_SStructMatrixGetObject (HYPRE_SStructMatrix matrix, void **object) <i>Get a reference to the constructed matrix object</i>	18
	int HYPRE_SStructMatrixSetComplex (HYPRE_SStructMatrix matrix) <i>Set the matrix to be complex</i>	
2.4.8	int HYPRE_SStructMatrixPrint (const char *filename, HYPRE_SStructMatrix matrix, int all) <i>Print the matrix to file</i>	19

2.4.1

```

int
HYPRE_SStructMatrixSetValues (HYPRE_SStructMatrix matrix, int part, int
*index, int var, int nentries, int *entries, double *values)

```

Set matrix coefficients index by index.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

NOTE: The entries in this routine must all be of the same type: either stencil or non-stencil, but not both. Also, if they are stencil entries, they must all represent couplings to the same variable type (there are no such restrictions for non-stencil entries).

If the matrix is complex, then **values** consists of pairs of doubles representing the real and imaginary parts of each complex value.

See Also: HYPRE_SStructMatrixSetComplex (*→ page 16*)

2.4.2

```

int
HYPRE_SStructMatrixSetBoxValues (HYPRE_SStructMatrix matrix, int
part, int *ilower, int *iupper, int var, int nentries, int *entries, double *values)

```

Set matrix coefficients a box at a time.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

NOTE: The entries in this routine must all be of the same type: either stencil or non-stencil, but not both. Also, if they are stencil entries, they must all represent couplings to the same variable type (there are no such restrictions for non-stencil entries).

If the matrix is complex, then **values** consists of pairs of doubles representing the real and imaginary parts of each complex value.

See Also: `HYPRE_SStructMatrixSetComplex` (*→ page 16*)

2.4.3

```
int
HYPRE_SStructMatrixAddToValues (HYPRE_SStructMatrix matrix, int part,
int *index, int var, int nentries, int *entries, double *values)
```

Add to matrix coefficients index by index.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

NOTE: The entries in this routine must all be of the same type: either stencil or non-stencil, but not both. Also, if they are stencil entries, they must all represent couplings to the same variable type.

If the matrix is complex, then **values** consists of pairs of doubles representing the real and imaginary parts of each complex value.

See Also: `HYPRE_SStructMatrixSetComplex` (*→ page 16*)

2.4.4

```
int
HYPRE_SStructMatrixAddToBoxValues (HYPRE_SStructMatrix matrix, int
part, int *ilower, int *iupper, int var, int nentries, int *entries, double *values)
```

Add to matrix coefficients a box at a time.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

NOTE: The entries in this routine must all be of stencil type. Also, they must all represent couplings to the same variable type.

If the matrix is complex, then `values` consists of pairs of doubles representing the real and imaginary parts of each complex value.

See Also: `HYPRE_SStructMatrixSetComplex` (*→ page 16*)

2.4.5

```
int
HYPRE_SStructMatrixSetSymmetric (HYPRE_SStructMatrix matrix, int
symmetric)
```

Define symmetry properties of the matrix. By default, matrices are assumed to be nonsymmetric. Significant storage savings can be made if the matrix is symmetric.

2.4.6

```
int
HYPRE_SStructMatrixSetObjectType (HYPRE_SStructMatrix matrix, int
type)
```

Set the storage type of the matrix object to be constructed. Currently, `type` can be either `HYPRE_SSTRUCT` (the default) or `HYPRE_PARCSR`.

See Also: `HYPRE_SStructMatrixGetObject` (*→2.4.7, page 18*)

2.4.7

```
int
HYPRE_SStructMatrixGetObject (HYPRE_SStructMatrix matrix, void
**object)
```

Get a reference to the constructed matrix object.

See Also: `HYPRE_SStructMatrixSetObjectType` (→2.4.6, *page 18*)

2.4.8

```
int
HYPRE_SStructMatrixPrint (const char *filename, HYPRE_SStructMatrix
matrix, int all)
```

Print the matrix to file. This is mainly for debugging purposes.

2.5

SStruct Vectors

Names

```
typedef struct hypre_SStructVector_struct* HYPRE_SStructVector
The vector object
```

```
int
HYPRE_SStructVectorCreate (MPI_Comm comm,
                           HYPRE_SStructGrid grid,
                           HYPRE_SStructVector *vector)
Create a vector object
```

```
int
HYPRE_SStructVectorDestroy (HYPRE_SStructVector vector)
Destroy a vector object
```

```
int
HYPRE_SStructVectorInitialize (HYPRE_SStructVector vector)
Prepare a vector object for setting coefficient values
```

```
2.5.1 int
HYPRE_SStructVectorSetValues (HYPRE_SStructVector vector, int part,
                              int *index, int var, double *value)
Set vector coefficients index by index ..... 21
```

```
2.5.2 int
```

		HYPRE_SStructVectorSetBoxValues (HYPRE_SStructVector vector, int part, int *ilower, int *iupper, int var, double *values)	
		<i>Set vector coefficients a box at a time</i>	21
2.5.3	int	HYPRE_SStructVectorAddToValues (HYPRE_SStructVector vector, int part, int *index, int var, double *value)	
		<i>Set vector coefficients index by index</i>	21
2.5.4	int	HYPRE_SStructVectorAddToBoxValues (HYPRE_SStructVector vector, int part, int *ilower, int *iupper, int var, double *values)	
		<i>Set vector coefficients a box at a time</i>	22
	int	HYPRE_SStructVectorAssemble (HYPRE_SStructVector vector)	
		<i>Finalize the construction of the vector before using</i>

		<i>Get a reference to the constructed vector object</i>	23
	int	HYPRE_SStructVectorSetComplex (HYPRE_SStructVector vector)	
		<i>Set the vector to be complex</i>	
2.5.9	int	HYPRE_SStructVectorPrint (const char *filename, HYPRE_SStructVector vector, int all)	
		<i>Print the vector to file</i>	24

2.5.1

```
int
HYPRE_SStructVectorSetValues (HYPRE_SStructVector vector, int part, int
*index, int var, double *value)
```

Set vector coefficients index by index.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

If the vector is complex, then **value** consists of a pair of doubles representing the real and imaginary parts of the complex value.

See Also: [HYPRE_SStructVectorSetComplex](#) (*→ page 20*)

2.5.2

```
int
HYPRE_SStructVectorSetBoxValues (HYPRE_SStructVector vector, int part,
int *ilower, int *iupper, int var, double *values)
```

Set vector coefficients a box at a time.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

If the vector is complex, then **values** consists of pairs of doubles representing the real and imaginary parts of each complex value.

See Also: [HYPRE_SStructVectorSetComplex](#) (*→ page 20*)

2.5.3

```
int
HYPRE_SStructVectorAddToValues (HYPRE_SStructVector vector, int part,
int *index, int var, double *value)
```

Set vector coefficients index by index.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

If the vector is complex, then **value** consists of a pair of doubles representing the real and imaginary parts of the complex value.

See Also: `HYPRE_SStructVectorSetComplex` (*→ page 20*)

2.5.4

```
int
HYPRE_SStructVectorAddToBoxValues (HYPRE_SStructVector vector, int
part, int *ilower, int *iupper, int var, double *values)
```

Set vector coefficients a box at a time.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

If the vector is complex, then **values** consists of pairs of doubles representing the real and imaginary parts of each complex value.

See Also: `HYPRE_SStructVectorSetComplex` (*→ page 20*)

2.5.5

```
int
HYPRE_SStructVectorGetValues (HYPRE_SStructVector vector, int part, int
*index, int var, double *value)
```

Get vector coefficients index by index.

NOTE: Users may only get values on processes that own the associated variables.

If the vector is complex, then **value** consists of a pair of doubles representing the real and imaginary parts of the complex value.

See Also: `HYPRE_SStructVectorSetComplex` (*→ page 20*)

2.5.6

```
int
HYPRE_SStructVectorGetBoxValues (HYPRE_SStructVector vector, int part,
int *ilower, int *iupper, int var, double *values)
```

Get vector coefficients a box at a time.

NOTE: Users may only get values on processes that own the associated variables.

If the vector is complex, then **values** consists of pairs of doubles representing the real and imaginary parts of each complex value.

See Also: `HYPRE_SStructVectorSetComplex` (*→ page 20*)

2.5.7

```
int
HYPRE_SStructVectorSetObjectType (HYPRE_SStructVector vector, int
type)
```

Set the storage type of the vector object to be constructed. Currently, **type** can be either `HYPRE_SSTRUCT` (the default) or `HYPRE_PARCSR`.

See Also: `HYPRE_SStructVectorGetObject` (*→2.5.8, page 23*)

2.5.8

```
int
HYPRE_SStructVectorGetObject (HYPRE_SStructVector vector, void
**object)
```

Get a reference to the constructed vector object.

See Also: `HYPRE_SStructVectorSetObjectType` ([→2.5.7, page 23](#))

2.5.9

```
int  
HYPRE_SStructVectorPrint (const char *filename, HYPRE_SStructVector  
vector, int all)
```

Print the vector to file. This is mainly for debugging purposes.

IJ System Interface

This interface represents a linear-algebraic conceptual view of a linear system. The 'I' and 'J' in the name are meant to be mnemonic for the traditional matrix notation $A(I,J)$.

Names

3.1	IJ Matrices	25
3.2	IJ Vectors	30

IJ Matrices

Names

	typedef struct hypre_IJMatrix_struct* HYPRE_IJMatrix <i>The matrix object</i>	
3.1.1	int HYPRE_IJMatrixCreate (MPL_Comm comm, int ilower, int iupper, int jlower, int jupper, HYPRE_IJMatrix *matrix) <i>Create a matrix object</i>	26
3.1.2	int HYPRE_IJMatrixDestroy (HYPRE_IJMatrix matrix) <i>Destroy a matrix object</i>	27
3.1.3	int HYPRE_IJMatrixInitialize (HYPRE_IJMatrix matrix) <i>Prepare a matrix object for setting coefficient values</i>	27

3.1.9	int	HYPRE_IJMatrixSetRowSizes (HYPRE_IJMatrix matrix, const int *sizes) <i>(Optional) Set the max number of nonzeros to expect in each row</i>	29
3.1.10	int	HYPRE_IJMatrixSetDiagOffdSizes (HYPRE_IJMatrix matrix, const int *diag_sizes, const int *offdiag_sizes) <i>(Optional) Set the max number of nonzeros to expect in each row of the diagonal and off-diagonal blocks</i>	29
3.1.11	int	HYPRE_IJMatrixRead (const char *filename, MPI_Comm comm, int type, HYPRE_IJMatrix *matrix) <i>Read the matrix from file</i>	30
3.1.12	int	HYPRE_IJMatrixPrint (HYPRE_IJMatrix matrix, const char *filename) <i>Print the matrix to file</i>	30

3.1.1

int
HYPRE_IJMatrixCreate (MPI_Comm comm, int ilower, int iupper, int jlower,
int jupper, HYPRE_IJMatrix *matrix)

Create a matrix object. Each process owns some unique consecutive range of rows, indicated by the global row indices `ilower` and `iupper`. The row data is required to be such that the value of `ilower` on any process p be exactly one more than the value of `iupper` on process $p - 1$. Note that the first row of the global matrix may start with any integer value. In particular, one may use zero- or one-based indexing.

For square matrices, `jlower` and `jupper` typically should match `ilower` and `iupper`, respectively. For rectangular matrices, `jlower` and `jupper` should define a partitioning of the columns. This partitioning must be used for any vector v that will be used in matrix-vector products with the rectangular matrix. The matrix data structure may use `jlower` and `jupper` to store the diagonal blocks (rectangular in general) of the matrix separately from the rest of the matrix.

Collective.

3.1.2

```
int  HYPRE_IJMatrixDestroy (HYPRE_IJMatrix matrix)
```

Destroy a matrix object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

3.1.3

```
int  HYPRE_IJMatrixInitialize (HYPRE_IJMatrix matrix)
```

Prepare a matrix object for setting coefficient values. This routine will also re-initialize an already assembled matrix, allowing users to modify coefficient values.

3.1.4

```
int
HYPRE_IJMatrixSetValues (HYPRE_IJMatrix matrix, int nrows, int *ncols,
    const int *rows, const int *cols, const double *values)
```

Sets values for **nrows** of the matrix. The arrays **ncols** and **rows** are of dimension **nrows** and contain the number of columns in each row and the row indices, respectively. The array **cols** contains the column indices for each of the **rows**, and is ordered by rows. The data in the **values** array corresponds directly to the column entries in **cols**. Erases any previous values at the specified locations and replaces them with new ones, or, if there was no value there before, inserts a new one.

Not collective.

3.1.5

```
int
HYPRE_IJMatrixAddToValues (HYPRE_IJMatrix matrix, int nrows, int
    *ncols, const int *rows, const int *cols, const double *values)
```

Adds to values for **nrows** of the matrix. Usage details are analogous to **HYPRE_IJMatrixSetValues** (→3.1.4, *page 27*). Adds to any previous values at the specified locations, or, if there was no value there before, inserts a new one.

Not collective.

3.1.6

```
int
HYPRE_IJMatrixGetValues (HYPRE_IJMatrix matrix, int nrows, int *ncols,
    int *rows, int *cols, double *values)
```

Gets values for **nrows** of the matrix. Usage details are analogous to **HYPRE_IJMatrixSetValues** (→3.1.4, *page 27*).

3.1.7

```
int  HYPRE_IJMatrixSetObjectType (HYPRE_IJMatrix matrix, int type)
```

Set the storage type of the matrix object to be constructed. Currently, **type** can only be **HYPRE_PARCSR**.

Not collective, but must be the same on all processes.

See Also: `HYPRE_IJMatrixGetObject` ([→3.1.8, page 29](#))

3.1.8

```
int HYPRE_IJMatrixGetObject (HYPRE_IJMatrix matrix, void **object)
```

Get a reference to the constructed matrix object.

See Also: `HYPRE_IJMatrixSetObjectType` ([→3.1.7, page 28](#))

3.1.9

```
int HYPRE_IJMatrixSetRowSizes (HYPRE_IJMatrix matrix, const int *sizes)
```

(Optional) Set the max number of nonzeros to expect in each row. The array `sizes` contains estimated sizes for each row on this process. This call can significantly improve the efficiency of matrix construction, and should always be utilized if possible.

Not collective.

3.1.10

```
int HYPRE_IJMatrixSetDiagOffdSizes (HYPRE_IJMatrix matrix, const int *diag_sizes, const int *offdiag_sizes)
```

(Optional) Set the max number of nonzeros to expect in each row of the diagonal and off-diagonal blocks. The diagonal block is the submatrix whose column numbers correspond to rows owned by this process, and the off-diagonal block is everything else. The arrays `diag_sizes` and `offdiag_sizes` contain estimated sizes

for each row of the diagonal and off-diagonal blocks, respectively. This routine can significantly improve the efficiency of matrix construction, and should always be utilized if possible.

Not collective.

3.1.11

```
int
HYPRE_IJMatrixRead (const char *filename, MPI_Comm comm, int type,
HYPRE_IJMatrix *matrix)
```

Read the matrix from file. This is mainly for debugging purposes.

3.1.12

```
int  HYPRE_IJMatrixPrint (HYPRE_IJMatrix matrix, const char *filename)
```

Print the matrix to file. This is mainly for debugging purposes.

3.2

IJ Vectors

Names

```
typedef struct  hypre_IJVector_struct*  HYPRE_IJVector
The vector object
```

- | | | |
|-------|--|----|
| 3.2.1 | <pre>int HYPRE_IJVectorCreate (MPI_Comm comm, int jlower, int jupper, HYPRE_IJVector *vector) <i>Create a vector object</i></pre> | 31 |

| 3.2.3 | <pre>int</pre> | |

	HYPRE_IJVectorInitialize (HYPRE_IJVector vector) <i>Prepare a vector object for setting coefficient values</i>	32
3.2.4	int HYPRE_IJVectorSetValues (HYPRE_IJVector vector, int nvalues, const int *indices, const double *values) <i>Sets values in vector</i>	32
3.2.5	int HYPRE_IJVectorAddToValues (HYPRE_IJVector vector, int nvalues, const int *indices, const double *values) <i>Adds to values in vector</i>	33
	int HYPRE_IJVectorAssemble (HYPRE_IJVector vector) <i>Finalize the construction of the vector before using</i>	
3.2.6	int HYPRE_IJVectorGetValues (HYPRE_IJVector vector, int nvalues, const int *indices, double *values) <i>Gets values in vector</i>	33
3.2.7	int HYPRE_IJVectorSetObjectType (HYPRE_IJVector vector, int type) <i>Set the storage type of the vector object to be constructed</i>	33
	int HYPRE_IJVectorGetObjectType (HYPRE_IJVector vector, int *type) <i>Get the storage type of the constructed vector object</i>	
3.2.8	int HYPRE_IJVectorGetObject (HYPRE_IJVector vector, void **object) <i>Get a reference to the constructed vector object</i>	34
3.2.9	int HYPRE_IJVectorRead (const char *filename, MPI_Comm comm, int type, HYPRE_IJVector *vector) <i>Read the vector from file</i>	34
3.2.10	int HYPRE_IJVectorPrint (HYPRE_IJVector vector, const char *filename) <i>Print the vector to file</i>	34

3.2.1

```

int
HYPRE_IJVectorCreate (MPI_Comm comm, int jlower, int jupper,
HYPRE_IJVector *vector)

```

Create a vector object. Each process owns some unique consecutive range of vector unknowns, indicated by the global indices `jlower` and `jupper`. The data is required to be such that the value of `jlower` on any

process p be exactly one more than the value of `jupper` on process $p - 1$. Note that the first index of the global vector may start with any integer value. In particular, one may use zero- or one-based indexing.

Collective.

3.2.2

```
int  HYPRE_IJVectorDestroy (HYPRE_IJVector vector)
```

Destroy a vector object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

3.2.3

```
int  HYPRE_IJVectorInitialize (HYPRE_IJVector vector)
```

Prepare a vector object for setting coefficient values. This routine will also re-initialize an already assembled vector, allowing users to modify coefficient values.

3.2.4

```
int
HYPRE_IJVectorSetValues (HYPRE_IJVector vector, int nvalues, const int
*indices, const double *values)
```

Sets values in vector. The arrays `values` and `indices` are of dimension `nvalues` and contain the vector values to be set and the corresponding global vector indices, respectively. Erases any previous values at the specified locations and replaces them with new ones.

Not collective.

3.2.5

```
int
HYPRE_IJVectorAddToValues (HYPRE_IJVector vector, int nvalues, const int
*indices, const double *values)
```

Adds to values in vector. Usage details are analogous to `HYPRE_IJVectorSetValues` (→3.2.4, *page 32*).

Not collective.

3.2.6

```
int
HYPRE_IJVectorGetValues (HYPRE_IJVector vector, int nvalues, const int
*indices, double *values)
```

Gets values in vector. Usage details are analogous to `HYPRE_IJVectorSetValues` (→3.2.4, *page 32*).

Not collective.

3.2.7

```
int HYPRE_IJVectorSetObjectType (HYPRE_IJVector vector, int type)
```

Set the storage type of the vector object to be constructed. Currently, `type` can only be `HYPRE_PARCSR`.

Not collective, but must be the same on all processes.

See Also: `HYPRE_IJVectorGetObject` (→3.2.8, *page 34*)

3.2.8

```
int  HYPRE_IJVectorGetObject (HYPRE_IJVector vector, void **object)
```

Get a reference to the constructed vector object.

See Also: `HYPRE_IJVectorSetObjectType` ([→3.2.7, page 33](#))

3.2.9

```
int  
HYPRE_IJVectorRead (const char *filename, MPI_Comm comm, int type,  
HYPRE_IJVector *vector)
```

Read the vector from file. This is mainly for debugging purposes.

3.2.10

```
int  HYPRE_IJVectorPrint (HYPRE_IJVector vector, const char *filename)
```

Print the vector to file. This is mainly for debugging purposes.

4

Struct Solvers

These solvers use matrix/vector storage schemes that are tailored to structured grid problems.

Names

4.1	Struct Solvers	35
4.2	Struct Jacobi Solver	35
4.3	Struct PFMG Solver	37
4.4	Struct SMG Solver	38
4.5	Struct PCG Solver	40
4.6	Struct GMRES Solver	41

4.1

Struct Solvers

Names

```
typedef struct hypr_StructSolver_struct* HYPRE_StructSolver
The solver object
```

4.2

Struct Jacobi Solver

Names

	int	HYPRE_StructJacobiCreate (MPI_Comm comm, HYPRE_StructSolver *solver)	
		<i>Create a solver object</i>	
4.2.1	int	HYPRE_StructJacobiDestroy (HYPRE_StructSolver solver)	
		<i>Destroy a solver object</i>	36
	int	HYPRE_StructJacobiSetup (HYPRE_StructSolver solver, HYPRE_StructMatrix A, HYPRE_StructVector b, HYPRE_StructVector x)	
	int	HYPRE_StructJacobiSolve (HYPRE_StructSolver solver, HYPRE_StructMatrix A, HYPRE_StructVector b, HYPRE_StructVector x)	
		<i>Solve the system</i>	
	int	HYPRE_StructJacobiSetTol (HYPRE_StructSolver solver, double tol)	
		<i>(Optional) Set the convergence tolerance</i>	
	int	HYPRE_StructJacobiSetMaxIter (HYPRE_StructSolver solver, int max_iter)	
		<i>(Optional) Set maximum number of iterations</i>	
	int	HYPRE_StructJacobiSetZeroGuess (HYPRE_StructSolver solver)	
		<i>(Optional) Use a zero initial guess</i>	
	int	HYPRE_StructJacobiSetNonZeroGuess (HYPRE_StructSolver solver)	
		<i>(Optional) Use a nonzero initial guess</i>	
	int	HYPRE_StructJacobiGetNumIterations (HYPRE_StructSolver solver, int *num_iterations)	
		<i>Return the number of iterations taken</i>	
	int	HYPRE_StructJacobiGetFinalRelativeResidualNorm	
		(HYPRE_StructSolver solver, double *norm)	
		<i>Return the norm of the final relative residual</i>	

4.2.1

```
int  HYPRE_StructJacobiDestroy (HYPRE_StructSolver solver)
```

Destroy a solver object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

4.3

Struct PFMG Solver

Names

```

int
HYPRE_StructPFMGCreate (MPI_Comm comm,
                        HYPRE_StructSolver *solver)
    Create a solver object

int
HYPRE_StructPFMGDestroy (HYPRE_StructSolver solver)
    Destroy a solver object

int
HYPRE_StructPFMGSetup (HYPRE_StructSolver solver,
                        HYPRE_StructMatrix A,
                        HYPRE_StructVector b,
                        HYPRE_StructVector x)

int
HYPRE_StructPFMGSolve (HYPRE_StructSolver solver,
                        HYPRE_StructMatrix A,
                        HYPRE_StructVector b,
                        HYPRE_StructVector x)
    Solve the system

int
HYPRE_StructPFMGSetTol (HYPRE_StructSolver solver, double tol)
    (Optional) Set the convergence tolerance

int
HYPRE_StructPFMGSetMaxIter (HYPRE_StructSolver solver,
                            int max_iter)
    (Optional) Set maximum number of iterations

int
HYPRE_StructPFMGSetRelChange (HYPRE_StructSolver solver,
                                int rel_change)
    (Optional) Additionally require that the relative difference in successive it-
    erates be small

int
```

HYPRE_StructPFMGSetZeroGuess (HYPRE_StructSolver solver)
(Optional) Use a zero initial guess

int
HYPRE_StructPFMGSetNonZeroGuess (HYPRE_StructSolver solver)
(Optional) Use a nonzero initial guess

int
HYPRE_StructPFMGSetRelaxType (HYPRE_StructSolver solver,
int relax_type)
(Optional) Set relaxation type

int
HYPRE_StructPFMGSetNumPreRelax (HYPRE_StructSolver solver,
int num_pre_relax)
(Optional) Set number of pre-relaxation sweeps

int
HYPRE_StructPFMGSetNumPostRelax (HYPRE_StructSolver solver,
int num_post_relax)
(Optional) Set number of post-relaxation sweeps

int
HYPRE_StructPFMGSetSkipRelax (HYPRE_StructSolver solver,
int skip_relax)
(Optional) Skip relaxation on certain grids for isotropic problems

int
HYPRE_StructPFMGSetLogging (HYPRE_StructSolver solver, int logging)
(Optional) Set the amount of logging to do

int
HYPRE_StructPFMGGetNumIterations (HYPRE_StructSolver solver,
int *num_iterations)
Return the number of iterations taken

int
HYPRE_StructPFMGGetFinalRelativeResidualNorm
(HYPRE_StructSolver
solver,
double *norm)
Return the norm of the final relative residual

4.4

Struct SMG Solver

Names

int
HYPRE_StructSMGCreate (MPI_Comm comm,
HYPRE_StructSolver *solver)
Create a solver object

int

HYPRE_StructSMGDestroy (HYPRE_StructSolver solver)

Destroy a solver object

int

HYPRE_StructSMGSetup (HYPRE_StructSolver solver,
HYPRE_StructMatrix A,
HYPRE_StructVector b, HYPRE_StructVector x)

int

HYPRE_StructSMGSolve (HYPRE_StructSolver solver,
HYPRE_StructMatrix A, HYPRE_StructVector b,
HYPRE_StructVector x)

Solve the system

int

HYPRE_StructSMGSetTol (HYPRE_StructSolver solver, double tol)
(Optional) Set the convergence tolerance

int

HYPRE_StructSMGSetMaxIter (HYPRE_StructSolver solver, int max_iter)
(Optional) Set maximum number of iterations

int

HYPRE_StructSMGSetRelChange (HYPRE_StructSolver solver,
int rel_change)
*(Optional) Additionally require that the relative difference in successive it-
erates be small*

int

HYPRE_StructSMGSetZeroGuess (HYPRE_StructSolver solver)
(Optional) Use a zero initial guess

int

HYPRE_StructSMGSetNonZeroGuess (HYPRE_StructSolver solver)
(Optional) Use a nonzero initial guess

int

HYPRE_StructSMGSetNumPreRelax (HYPRE_StructSolver solver,
int num_pre_relax)
(Optional) Set number of pre-relaxation sweeps

int

HYPRE_StructSMGSetNumPostRelax (HYPRE_StructSolver solver,
int num_post_relax)
(Optional) Set number of post-relaxation sweeps

int

HYPRE_StructSMGSetLogging (HYPRE_StructSolver solver, int logging)
(Optional) Set the amount of logging to do

int

HYPRE_StructSMGGetNumIterations (HYPRE_StructSolver solver,
int *num_iterations)
Return the number of iterations taken

int

HYPRE_StructSMGGetFinalRelativeResidualNorm (HYPRE_StructSolver
solver,
double *norm)
Return the norm of the final relative residual

4.5

Struct PCG Solver

Names

```

int
HYPRE_StructPCGCreate (MPI_Comm comm,
                        HYPRE_StructSolver *solver)
    Create a solver object

int
HYPRE_StructPCGDestroy (HYPRE_StructSolver solver)
    Destroy a solver object

int
HYPRE_StructPCGSetup (HYPRE_StructSolver solver,
                        HYPRE_StructMatrix A,
                        HYPRE_StructVector b, HYPRE_StructVector x)

int
HYPRE_StructPCGSolve (HYPRE_StructSolver solver,
                        HYPRE_StructMatrix A, HYPRE_StructVector b,
                        HYPRE_StructVector x)
    Solve the system

int
HYPRE_StructPCGSetTol (HYPRE_StructSolver solver, double tol)
    (Optional) Set the convergence tolerance

int
HYPRE_StructPCGSetMaxIter (HYPRE_StructSolver solver, int max_iter)
    (Optional) Set maximum number of iterations

int
HYPRE_StructPCGSetTwoNorm (HYPRE_StructSolver solver,
                             int two_norm)
    (Optional) Use the two-norm in stopping criteria

int
HYPRE_StructPCGSetRelChange (HYPRE_StructSolver solver,
                              int rel_change)
    (Optional) Additionally require that the relative difference in successive it-
    erates be small

int
HYPRE_StructPCGSetPrecond (HYPRE_StructSolver solver,
                             HYPRE_PtrToStructSolverFcn precondition,
                             HYPRE_PtrToStructSolverFcn
                             precondition_setup,
                             HYPRE_StructSolver precondition_solver)
    (Optional) Set the preconditioner to use

int

```

HYPRE_StructPCGSetLogging (HYPRE_StructSolver solver, int logging)
(Optional) Set the amount of logging to do

int
HYPRE_StructPCGGetNumIterations (HYPRE_StructSolver solver,
int *num_iterations)
Return the number of iterations taken

int
HYPRE_StructPCGGetFinalRelativeResidualNorm (HYPRE_StructSolver
solver,
double *norm)
Return the norm of the final relative residual

int
HYPRE_StructDiagScaleSetup (HYPRE_StructSolver solver,
HYPRE_StructMatrix A,
HYPRE_StructVector y,
HYPRE_StructVector x)
Setup routine for diagonal preconditioning

int
HYPRE_StructDiagScale (HYPRE_StructSolver solver,
HYPRE_StructMatrix HA,
HYPRE_StructVector Hy,
HYPRE_StructVector Hx)
Solve routine for diagonal preconditioning

4.6

Struct GMRES Solver

Names

int
HYPRE_StructGMRESCreate (MPI_Comm comm,
HYPRE_StructSolver *solver)
Create a solver object

int
HYPRE_StructGMRESDestroy (HYPRE_StructSolver solver)
Destroy a solver object

int
HYPRE_StructGMRESSetup (HYPRE_StructSolver solver,
HYPRE_StructMatrix A,
HYPRE_StructVector b,
HYPRE_StructVector x)
set up

int

```

HYPRE_StructGMRESSolve ( HYPRE_StructSolver solver,
                           HYPRE_StructMatrix A,
                           HYPRE_StructVector b,
                           HYPRE_StructVector x )

    Solve the system

int
HYPRE_StructGMRESSetTol ( HYPRE_StructSolver solver, double tol )
    (Optional) Set the convergence tolerance

int
HYPRE_StructGMRESSetMaxIter ( HYPRE_StructSolver solver,
                               int max_iter )
    (Optional) Set maximum number of iterations

int
HYPRE_StructGMRESSetPrecond ( HYPRE_StructSolver solver,
                               HYPRE_PtrToStructSolverFcn precondition,
                               HYPRE_PtrToStructSolverFcn
                               precondition_setup,
                               HYPRE_StructSolver precondition_solver )
    (Optional) Set the preconditioner to use

int
HYPRE_StructGMRESSetLogging ( HYPRE_StructSolver solver,
                               int logging )
    (Optional) Set the amount of logging to do

int
HYPRE_StructGMRESGetNumIterations ( HYPRE_StructSolver solver,
                                       int *num_iterations )
    Return the number of iterations taken

int
HYPRE_StructGMRESGetFinalRelativeResidualNorm (
    HYPRE_StructSolver
    solver,
    double *norm )
    Return the norm of the final relative residual

```

5

SStruct Solvers

These solvers use matrix/vector storage schemes that are tailored to semi-structured grid problems.

Names

5.1	SStruct Solvers	
	43
5.2	SStruct PCG Solver	
	43
5.3	SStruct GMRES Solver	
	45
5.4	SStruct SysPFMG Solver	
	46

5.1

SStruct Solvers

Names

```
typedef struct hypre_SStructSolver_struct* HYPRE_SStructSolver
The solver object
```

5.2

SStruct PCG Solver

Names

```
int
HYPRE_SStructPCGCreate (MPI_Comm comm,
                        HYPRE_SStructSolver *solver)
Create a solver object
```

5.2.1 int

HYPRE_SStructPCGDestroy (HYPRE_SStructSolver solver)	
<i>Destroy a solver object</i>	45
int	
HYPRE_SStructPCGSetup (HYPRE_SStructSolver solver, HYPRE_SStructMatrix A, HYPRE_SStructVector b, HYPRE_SStructVector x)	
int	
HYPRE_SStructPCGSolve (HYPRE_SStructSolver solver, HYPRE_SStructMatrix A, HYPRE_SStructVector b, HYPRE_SStructVector x)	
<i>Solve the system</i>	
int	
HYPRE_SStructPCGSetTol (HYPRE_SStructSolver solver, double tol)	
<i>(Optional) Set the convergence tolerance</i>	
int	
HYPRE_SStructPCGSetMaxIter (HYPRE_SStructSolver solver, int max_iter)	
<i>(Optional) Set maximum number of iterations</i>	
int	
HYPRE_SStructPCGSetTwoNorm (HYPRE_SStructSolver solver, int two_norm)	
<i>(Optional) Set type of norm to use in stopping criteria</i>	
int	
HYPRE_SStructPCGSetRelChange (HYPRE_SStructSolver solver, int rel_change)	
<i>(Optional) Set to use additional relative-change convergence test</i>	
int	
HYPRE_SStructPCGSetPrecond (HYPRE_SStructSolver solver, HYPRE_PtrToSStructSolverFcn precondition, HYPRE_PtrToSStructSolverFcn precond_setup, void *precond_solver)	
<i>(Optional) Set the preconditioner to use</i>	
int

<i>(Optional) Set the amount of logging to do</i>	
int	
HYPRE_SStructPCGGetNumIterations (HYPRE_SStructSolver solver, int *num_iterations)	
<i>Return the number of iterations taken</i>	
int	
HYPRE_SStructPCGGetFinalRelativeResidualNorm	
	(HYPRE_SStructSolver solver, double *norm)
<i>Return the norm of the final relative residual</i>	

5.2.1

```
int  HYPRE_SStructPCGDestroy (HYPRE_SStructSolver solver)
```

Destroy a solver object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

5.3

SStruct GMRES Solver

Names

```
int
HYPRE_SStructGMRESCreate (MPI_Comm comm,
                           HYPRE_SStructSolver *solver)
    Create a solver object

5.3.1 int
HYPRE_SStructGMRESDestroy (HYPRE_SStructSolver solver)
    Destroy a solver object ..... 46

int
HYPRE_SStructGMRESSetup (HYPRE_SStructSolver solver,
                           HYPRE_SStructMatrix A,
                           HYPRE_SStructVector b,
                           HYPRE_SStructVector x)

int
HYPRE_SStructGMRESSolve (HYPRE_SStructSolver solver,
                           HYPRE_SStructMatrix A,
                           HYPRE_SStructVector b,
                           HYPRE_SStructVector x)
    Solve the system

int
HYPRE_SStructGMRESSetKDim (HYPRE_SStructSolver solver, int k_dim)
    (Optional) Set the maximum size of the Krylov space

int
HYPRE_SStructGMRESSetTol (HYPRE_SStructSolver solver, double tol)
    (Optional) Set the convergence tolerance

int
```

HYPRE_SStructGMRESSetMaxIter (HYPRE_SStructSolver solver,
int max_iter)
(Optional) Set maximum number of iterations

int
HYPRE_SStructGMRESSetPrecond (HYPRE_SStructSolver solver,
HYPRE_PtrToSStructSolverFcn
precond,
HYPRE_PtrToSStructSolverFcn
precond_setup, void *precond_solver)
(Optional) Set the preconditioner to use

int
HYPRE_SStructGMRESSetLogging (HYPRE_SStructSolver solver,
int logging)
(Optional) Set the amount of logging to do

int
HYPRE_SStructGMRESGetNumIterations (HYPRE_SStructSolver solver,
int *num_iterations)
Return the number of iterations taken

int
HYPRE_SStructGMRESGetFinalRelativeResidualNorm (HYPRE_SStructSolver
solver,
double *norm)
Return the norm of the final relative residual

5.3.1

int **HYPRE_SStructGMRESDestroy** (HYPRE_SStructSolver solver)

Destroy a solver object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

5.4

SStruct SysPFMG Solver

Names

```

int
HYPRE_SStructSysPFMGCreate ( MPI_Comm comm,
                               HYPRE_SStructSolver *solver )
    Create a solver object

int
HYPRE_SStructSysPFMGDestroy (HYPRE_SStructSolver solver)
    Destroy a solver object

int
HYPRE_SStructSysPFMGSetup (HYPRE_SStructSolver solver,
                             HYPRE_SStructMatrix A,
                             HYPRE_SStructVector b,
                             HYPRE_SStructVector x)

int
HYPRE_SStructSysPFMGSolve (HYPRE_SStructSolver solver,
                             HYPRE_SStructMatrix A,
                             HYPRE_SStructVector b,
                             HYPRE_SStructVector x)
    Solve the system

int
HYPRE_SStructSysPFMGSetTol (HYPRE_SStructSolver solver, double tol)
    (Optional) Set the convergence tolerance

int
HYPRE_SStructSysPFMGSetMaxIter (HYPRE_SStructSolver solver,
                                   int max_iter)
    (Optional) Set maximum number of iterations

int
HYPRE_SStructSysPFMGSetRelChange (HYPRE_SStructSolver solver,
                                     int rel_change)
    (Optional) Additionally require that the relative difference in successive it-
    erates be small

int
HYPRE_SStructSysPFMGSetZeroGuess (HYPRE_SStructSolver solver)
    (Optional) Use a zero initial guess

int
HYPRE_SStructSysPFMGSetNonZeroGuess (HYPRE_SStructSolver
                                         solver)
    (Optional) Use a nonzero initial guess

int
HYPRE_SStructSysPFMGSetRelaxType (HYPRE_SStructSolver solver,
                                     int relax_type)
    (Optional) Set relaxation type

int
HYPRE_SStructSysPFMGSetNumPreRelax (HYPRE_SStructSolver solver,
                                       int num_pre_relax)
    (Optional) Set number of pre-relaxation sweeps

int

```

HYPRE_SStructSysPFMGSetNumPostRelax (HYPRE_SStructSolver solver, int num_post_relax)
(Optional) Set number of post-relaxation sweeps

int
HYPRE_SStructSysPFMGSetSkipRelax (HYPRE_SStructSolver solver, int skip_relax)
(Optional) Skip relaxation on certain grids for isotropic problems

int
HYPRE_SStructSysPFMGSetLogging (HYPRE_SStructSolver solver, int logging)
(Optional) Set the amount of logging to do

int
HYPRE_SStructSysPFMGGetNumIterations (HYPRE_SStructSolver solver, int *num_iterations)
Return the number of iterations taken

int
HYPRE_SStructSysPFMGGetFinalRelativeResidualNorm (HYPRE_SStructSolver solver, double *norm)
Return the norm of the final relative residual

6

ParCSR Solvers

These solvers use matrix/vector storage schemes that are tailored for general sparse matrix systems.

Names

6.1	ParCSR Solvers	49
6.2	ParCSR BoomerAMG Solver	49
6.3	ParCSR ParaSails Preconditioner	51
6.4	ParCSR Euclid Preconditioner	56
6.5	ParCSR Pilut Preconditioner	59
6.6	ParCSR PCG Solver	59
6.7	ParCSR GMRES Solver	61

6.1

ParCSR Solvers

Names

```
#define HYPRE_SOLVER_STRUCT
    The solver object
```

6.2

ParCSR BoomerAMG Solver

Names

```

int
HYPRE_BoomerAMGCreate (HYPRE_Solver *solver)
    Create a solver object

int
HYPRE_BoomerAMGDestroy (HYPRE_Solver solver)
    Destroy a solver object

int
HYPRE_BoomerAMGSetup (HYPRE_Solver solver,
                        HYPRE_ParCSRMatrix A,
                        HYPRE_ParVector b, HYPRE_ParVector x)

int
HYPRE_BoomerAMGSolve (HYPRE_Solver solver,
                        HYPRE_ParCSRMatrix A,
                        HYPRE_ParVector b, HYPRE_ParVector x)
    Solve the system

int
HYPRE_BoomerAMGSetTol (HYPRE_Solver solver, double tol)
    (Optional) Set the convergence tolerance

int
HYPRE_BoomerAMGSetMaxIter (HYPRE_Solver solver, int max_iter)
    (Optional) Set maximum number of iterations

int
HYPRE_BoomerAMGSetMaxLevels (HYPRE_Solver solver, int max_levels)
    (Optional) Set maximum number of multigrid levels

int
HYPRE_BoomerAMGSetStrongThreshold (HYPRE_Solver solver,
                                     double strong_threshold)
    (Optional) Set AMG strength threshold

int
HYPRE_BoomerAMGSetMaxRowSum (HYPRE_Solver solver,
                               double max_row_sum)
    (Optional)

int
HYPRE_BoomerAMGSetCoarsenType (HYPRE_Solver solver,
                                int coarsen_type)
    (Optional)

int
HYPRE_BoomerAMGSetMeasureType (HYPRE_Solver solver,
                                int measure_type)
    (Optional)

int
HYPRE_BoomerAMGSetCycleType (HYPRE_Solver solver, int cycle_type)
    (Optional)

int

```

HYPRE_BoomerAMGSetNumGridSweeps (HYPRE_Solver solver,
int *num_grid_sweeps)
(Optional)

int
HYPRE_BoomerAMGSetGridRelaxType (HYPRE_Solver solver,
int *grid_relax_type)
(Optional)

int
HYPRE_BoomerAMGSetGridRelaxPoints (HYPRE_Solver solver,
int **grid_relax_points)
(Optional)

int
HYPRE_BoomerAMGSetRelaxWeight (HYPRE_Solver solver,
double *relax_weight)
(Optional)

int
HYPRE_BoomerAMGSetIOOutDat (HYPRE_Solver solver, int ioutdat)
(Optional)

int
HYPRE_BoomerAMGSetDebugFlag (HYPRE_Solver solver, int debug_flag)
(Optional)

int
HYPRE_BoomerAMGGetNumIterations (HYPRE_Solver solver,
int *num_iterations)
Return the number of iterations taken

int
HYPRE_BoomerAMGGetFinalRelativeResidualNorm (HYPRE_Solver
solver, double
*rel_resid_norm)
Return the norm of the final relative residual

6.3

ParCSR ParaSails Preconditioner

Parallel sparse approximate inverse preconditioner for the ParCSR matrix format.

Names

int

	HYPRE_ParaSailsCreate (MPI_Comm comm, HYPRE_Solver *solver) <i>Create a ParaSails preconditioner</i>	
	int HYPRE_ParaSailsDestroy (HYPRE_Solver solver) <i>Destroy a ParaSails preconditioner</i>	
6.3.1	int HYPRE_ParaSailsSetup (HYPRE_Solver solver, HYPRE_ParCSRMatrix A, HYPRE_ParVector b, HYPRE_ParVector x) <i>Set up the ParaSails preconditioner</i>	52
6.3.2	int HYPRE_ParaSailsSolve (HYPRE_Solver solver, HYPRE_ParCSRMatrix A, HYPRE_ParVector b, HYPRE_ParVector x) <i>Apply the ParaSails preconditioner</i>	53
6.3.3	int HYPRE_ParaSailsSetParams (HYPRE_Solver solver, double thresh, int nlevels) <i>Set the threshold and levels parameter for the ParaSails preconditioner</i> ...	53
6.3.4	int HYPRE_ParaSailsSetFilter (HYPRE_Solver solver, double filter) <i>Set the filter parameter for the ParaSails preconditioner</i>	54
6.3.5	int HYPRE_ParaSailsSetSym (HYPRE_Solver solver, int sym) <i>Set the symmetry parameter for the ParaSails preconditioner</i>	54
6.3.6	int HYPRE_ParaSailsSetLoadbal (HYPRE_Solver solver, double loadbal) <i>Set the load balance parameter for the ParaSails preconditioner</i>	54
6.3.7	int HYPRE_ParaSailsSetReuse (HYPRE_Solver solver, int reuse) <i>Set the pattern reuse parameter for the ParaSails preconditioner</i>	55
6.3.8	int HYPRE_ParaSailsSetLogging (HYPRE_Solver solver, int logging) <i>Set the logging parameter for the ParaSails preconditioner</i>	55

6.3.1

```

int
HYPRE_ParaSailsSetup (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)

```

Set up the ParaSails preconditioner. This function should be passed to the iterative solver **SetPrecond** function.

Parameters:

- `solver` — [IN] Preconditioner object to set up.
- `A` — [IN] ParCSR matrix used to construct the preconditioner.
- `b` — Ignored by this function.
- `x` — Ignored by this function.

6.3.2

```
int
HYPRE_ParaSailsSolve (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
```

Apply the ParaSails preconditioner. This function should be passed to the iterative solver `SetPrecond` function.

Parameters:

- `solver` — [IN] Preconditioner object to apply.
- `A` — Ignored by this function.
- `b` — [IN] Vector to precondition.
- `x` — [OUT] Preconditioned vector.

6.3.3

```
int
HYPRE_ParaSailsSetParams (HYPRE_Solver solver, double thresh, int nlevels)
```

Set the threshold and levels parameter for the ParaSails preconditioner. The accuracy and cost of ParaSails are parameterized by these two parameters. Lower values of the threshold parameter and higher values of levels parameter lead to more accurate, but more expensive preconditioners.

Parameters:

- `solver` — [IN] Preconditioner object for which to set parameters.
- `thresh` — [IN] Value of threshold parameter, $0 \leq \text{thresh} \leq 1$. The default value is 0.1.
- `nlevels` — [IN] Value of levels parameter, $0 \leq \text{nlevels}$. The default value is 1.

6.3.4

```
int  HYPRE_ParaSailsSetFilter (HYPRE_Solver solver, double filter)
```

Set the filter parameter for the ParaSails preconditioner.

Parameters:

solver — [IN] Preconditioner object for which to set filter parameter.
filter — [IN] Value of filter parameter. The filter parameter is used to drop small nonzeros in the preconditioner, to reduce the cost of applying the preconditioner. Values from 0.05 to 0.1 are recommended. The default value is 0.1.

6.3.5

```
int  HYPRE_ParaSailsSetSym (HYPRE_Solver solver, int sym)
```

Set the symmetry parameter for the ParaSails preconditioner.

Parameters:

solver — [IN] Preconditioner object for which to set symmetry parameter.
sym — [IN] Value of the symmetry parameter:

value	meaning
0	nonsymmetric and/or indefinite problem, and nonsymmetric preconditioner
1	SPD problem, and SPD (factored) preconditioner
2	nonsymmetric, definite problem, and SPD (factored) preconditioner

6.3.6

```
int  HYPRE_ParaSailsSetLoadbal (HYPRE_Solver solver, double loadbal)
```

Set the load balance parameter for the ParaSails preconditioner.

Parameters:

solver — [IN] Preconditioner object for which to set the load balance parameter.

loadbal — [IN] Value of the load balance parameter, $0 \leq \text{loadbal} \leq 1$. A zero value indicates that no load balance is attempted; a value of unity indicates that perfect load balance will be attempted. The recommended value is 0.9 to balance the overhead of data exchanges for load balancing. No load balancing is needed if the preconditioner is very sparse and fast to construct. The default value when this parameter is not set is 0.

6.3.7

```
int  HYPRE_ParaSailsSetReuse (HYPRE_Solver solver, int reuse)
```

Set the pattern reuse parameter for the ParaSails preconditioner.

Parameters:

solver — [IN] Preconditioner object for which to set the pattern reuse parameter.

reuse — [IN] Value of the pattern reuse parameter. A nonzero value indicates that the pattern of the preconditioner should be reused for subsequent constructions of the preconditioner. A zero value indicates that the preconditioner should be constructed from scratch. The default value when this parameter is not set is 0.

6.3.8

```
int  HYPRE_ParaSailsSetLogging (HYPRE_Solver solver, int logging)
```

Set the logging parameter for the ParaSails preconditioner.

Parameters:

solver — [IN] Preconditioner object for which to set the logging parameter.

logging — [IN] Value of the logging parameter. A nonzero value sends statistics of the setup procedure to stdout. The default value when this parameter is not set is 0.

6.4

ParCSR Euclid Preconditioner

MPI Parallel ILU preconditioner

Options summary:

Option	Default	Synopsis
-level	1	ILU(k) factorization level
-bj	0 (false)	Use Block Jacobi ILU instead of PILU
-eu_stats	0 (false)	Print internal timing and statistics
-eu_mem	0 (false)	Print internal memory usage

Names

- int
HYPRE_EuclidCreate (MPL_Comm comm, HYPRE_Solver *solver)
Create a Euclid object
- int
HYPRE_EuclidDestroy (HYPRE_Solver solver)
Destroy a Euclid object
- 6.4.1 int
HYPRE_EuclidSetup (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
Set up the Euclid preconditioner 57
- 6.4.2 int
HYPRE_EuclidSolve (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
Apply the Euclid preconditioner 57
- 6.4.3 int
HYPRE_EuclidSetParams (HYPRE_Solver solver, int argc, char *argv[])
*Insert (name, value) pairs in Euclid's options database by passing Euclid
the command line (or an array of strings)* 57
- 6.4.4 int
HYPRE_EuclidSetParam (HYPRE_Solver solver, char *name, char *value)
Insert a single (name, value) pair in Euclid's options database 58
- 6.4.5 int
HYPRE_EuclidSetParamsFromFile (HYPRE_Solver solver, char *filename)
Insert (name, value) pairs in Euclid's options database 58

6.4.1

```
int
HYPRE_EuclidSetup (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
```

Set up the Euclid preconditioner. This function should be passed to the iterative solver **SetPrecond** function.

Parameters:

solver — [IN] Preconditioner object to set up.
A — [IN] ParCSR matrix used to construct the preconditioner.
b — Ignored by this function.
x — Ignored by this function.

6.4.2

```
int
HYPRE_EuclidSolve (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
```

Apply the Euclid preconditioner. This function should be passed to the iterative solver **SetPrecond** function.

Parameters:

solver — [IN] Preconditioner object to apply.
A — Ignored by this function.
b — [IN] Vector to precondition.
x — [OUT] Preconditioned vector.

6.4.3

```
int  HYPRE_EuclidSetParams (HYPRE_Solver solver, int argc, char *argv[])
```

Insert (name, value) pairs in Euclid's options database by passing Euclid the command line (or an array of strings). All Euclid options (e.g, level, drop-tolerance) are stored in this database. If a (name, value) pair already exists, this call updates the value. See also: **HYPRE_EuclidSetParam**, **HYPRE_EuclidSetParamsFromFile**.

Parameters: `argc` — [IN] Length of `argv` array
 `argv` — [IN] Array of strings

6.4.4

```
int  HYPRE_EuclidSetParam (HYPRE_Solver solver, char *name, char *value)
```

Insert a single (name, value) pair in Euclid’s options database. If the (name, value) pair already exists, this call updates the value. See also: `HYPRE_EuclidSetParams`, `HYPRE_EuclidSetParamsFromFile`.

Parameters: `argc` — [IN] Length of `argv` array
 `argv` — [IN] Array of strings

6.4.5

```
int  HYPRE_EuclidSetParamsFromFile (HYPRE_Solver solver, char *filename)
```

Insert (name, value) pairs in Euclid’s options database. Each line of the file should either begin with a “#,” indicating a comment line, or contain a (name value) pair, e.g:

```
>cat optionsFile
#sample runtime parameter file
-blockJacobi 3
-matFile /home/hysom/myfile.euclid
-doSomething true
-xx_coeff -1.0
```

See also: `HYPRE_EuclidSetParams`, `HYPRE_EuclidSetParams`.

Parameters: `filename`[IN] — Pathname/filename to read

6.5

ParCSR Pilut Preconditioner

Names

```

int
HYPRE_ParCSRPilutCreate (MPLComm comm, HYPRE_Solver *solver)
    Create a preconditioner object

int
HYPRE_ParCSRPilutDestroy (HYPRE_Solver solver)
    Destroy a preconditioner object

int
HYPRE_ParCSRPilutSetup (HYPRE_Solver solver,
                        HYPRE_ParCSRMatrix A,
                        HYPRE_ParVector b, HYPRE_ParVector x)

int
HYPRE_ParCSRPilutSolve (HYPRE_Solver solver,
                        HYPRE_ParCSRMatrix A,
                        HYPRE_ParVector b, HYPRE_ParVector x)
    Precondition the system

int
HYPRE_ParCSRPilutSetMaxIter (HYPRE_Solver solver, int max_iter)
    (Optional) Set maximum number of iterations

int
HYPRE_ParCSRPilutSetDropTolerance (HYPRE_Solver solver, double tol)
    (Optional)

int
HYPRE_ParCSRPilutSetFactorRowSize (HYPRE_Solver solver, int size)
    (Optional)

```

6.6

ParCSR PCG Solver

Names

```

int
HYPRE_ParCSRPCGCreate (MPLComm comm, HYPRE_Solver *solver)
    Create a solver object

int

```

HYPRE_ParCSRPCGDestroy (HYPRE_Solver solver)

Destroy a solver object

int

HYPRE_ParCSRPCGSetup (HYPRE_Solver solver,
HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)

int

HYPRE_ParCSRPCGSolve (HYPRE_Solver solver,
HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)

Solve the system

int

HYPRE_ParCSRPCGSetTol (HYPRE_Solver solver, double tol)
(Optional) Set the convergence tolerance

int

HYPRE_ParCSRPCGSetMaxIter (HYPRE_Solver solver, int max_iter)
(Optional) Set maximum number of iterations

int

HYPRE_ParCSRPCGSetTwoNorm (HYPRE_Solver solver, int two_norm)
(Optional) Use the two-norm in stopping criteria

int

HYPRE_ParCSRPCGSetRelChange (HYPRE_Solver solver, int rel_change)
(Optional) Additionally require that the relative difference in successive iterates be small

int

HYPRE_ParCSRPCGSetPrecond (HYPRE_Solver solver,
HYPRE_PtrToParSolverFcn precondition,
HYPRE_PtrToParSolverFcn
precond_setup,
HYPRE_Solver precondition_solver)
(Optional) Set the preconditioner to use

int

HYPRE_ParCSRPCGGetPrecond (HYPRE_Solver solver,
HYPRE_Solver *precond_data)

int

HYPRE_ParCSRPCGSetLogging (HYPRE_Solver solver, int logging)
(Optional) Set the amount of logging to do

int

HYPRE_ParCSRPCGGetNumIterations (HYPRE_Solver solver,
int *num_iterations)
Return the number of iterations taken

int

HYPRE_ParCSRPCGGetFinalRelativeResidualNorm (HYPRE_Solver
solver,
double *norm)
Return the norm of the final relative residual

int

HYPRE_ParCSRDiagScaleSetup (HYPRE_Solver solver,
 HYPRE_ParCSRMatrix A,
 HYPRE_ParVector y,
 HYPRE_ParVector x)
Setup routine for diagonal preconditioning

int
HYPRE_ParCSRDiagScale (HYPRE_Solver solver,
 HYPRE_ParCSRMatrix HA,
 HYPRE_ParVector Hy, HYPRE_ParVector Hx)
Solve routine for diagonal preconditioning

6.7

ParCSR GMRES Solver

Names

int
HYPRE_ParCSRGMRESCreate (MPL_Comm comm,
 HYPRE_Solver *solver)
Create a solver object

int
HYPRE_ParCSRGMRESDestroy (HYPRE_Solver solver)
Destroy a solver object

int
HYPRE_ParCSRGMRESSetup (HYPRE_Solver solver,
 HYPRE_ParCSRMatrix A,
 HYPRE_ParVector b,
 HYPRE_ParVector x)

int
HYPRE_ParCSRGMRESSolve (HYPRE_Solver solver,
 HYPRE_ParCSRMatrix A,
 HYPRE_ParVector b, HYPRE_ParVector x)
Solve the system

int
HYPRE_ParCSRGMRESSetKDim (HYPRE_Solver solver, int k_dim)
(Optional) Set the maximum size of the Krylov space

int
HYPRE_ParCSRGMRESSetTol (HYPRE_Solver solver, double tol)
(Optional) Set the convergence tolerance

int
HYPRE_ParCSRGMRESsetMaxIter (HYPRE_Solver solver, int max_iter)
(Optional) Set maximum number of iterations

int

HYPRE_ParCSRGMRESSetPrecond (HYPRE_Solver solver,
HYPRE_PtrToParSolverFcn precondition,
HYPRE_PtrToParSolverFcn
precond_setup,
HYPRE_Solver precondition_solver)
(Optional) Set the preconditioner to use

int
HYPRE_ParCSRGMRESGetPrecond (HYPRE_Solver solver,
HYPRE_Solver *precond_data)

int
HYPRE_ParCSRGMRESSetLogging (HYPRE_Solver solver, int logging)
(Optional) Set the amount of logging to do

int
HYPRE_ParCSRGMRESGetNumIterations (HYPRE_Solver solver,
int *num_iterations)
Return the number of iterations taken

int
HYPRE_ParCSRGMRESGetFinalRelativeResidualNorm (HYPRE_Solver
solver,
double *norm)
Return the norm of the final relative residual
